

## Innovation Report

### Internet Application

Khela Friday

Write a 2-3 paragraph report stating the Use of HTML, CSS, JS, GitHub and other technologies learned in this class for innovation in Library and Information Services.

Libraries heavily rely on the internet and technology to provide services for their patrons. A lot of what libraries do is by using the internet. Learning how to make websites using HTML is important because how else would librarians communicate with patrons. Plus using CSS and JavaScript to make it look professional and actually work is obviously important. Also not needing to use outside sources to make/fix a website would save time and money. Also, a lot of this course is researching and assessing other websites. I now understand that we are not reinventing the wheel and that all websites have to somewhat look familiar. Additionally, using GitHub makes saving much easier and all programs should have a saving mechanism like it.

We could also help patrons with making sites. I am now confident with the basics enough to help someone if they needed help. This also helped because it made me focus and attentive to detail because not closing one tag could ruin the entire site.
